

Controller Link™

... Knows when to water.

Save money by watering smart.

Landscapes are healthier when watered right.

Controller Link is climate controlled irrigation.

Landscapes are often over watered because conventional sprinkler timers do not react to changing weather conditions.

Water Smart

- Connect Controller Link to standard sprinkler timers, to manage up to four watering schedules.
- Wi-Fi enables Controller Link to retrieve five climate measurement each hour.

Water Right

- Controller Link enables deep and less frequent watering to develop healthy roots that sustain beautiful plants.

Don't Water in the Rain

- Controller Link uses an on-site rain gauge to prevent watering and know how long to wait before watering again.

Remote Management

- Use the Internet to monitor irrigation and make changes to watering schedules.
